PROFESSIONAL SUMMARY

- DevOps Support Engineer with 3+ years of experience in Linux-based production environments for banking applications. Skilled in incident management, containerization, and CI/CD. Recently built and deployed a full-stack Django application using Python, Docker and GitHub Actions.

TECHNICAL SKILLS

- **DevOps & Cloud:** Docker, GitHub Actions, AWS EC2, OpenShift, Kubernetes (Basics), Linux Administration
- **Databases:** PostgreSQL, MySQL
- **Languages:** Python (Django, Flask), Java, Shell Scripting
- **Tools:** Git, Jenkins (Basics)

EXPERIENCE

ACUTEC GLOBAL SERVICES PVT LTD

📍 Mumbai, India

Production Support Engineer / DevOps Support

📅 Dec 2022 - April 2026

- Supported Linux-based production environments for banking applications including RFMS and VAM systems.
- Supported Linux-based production environments for banking applications including RFMS, VAM, SFMS, and CCIL systems – ensuring 99.9% application availability.
- Performed application monitoring, log analysis, and root cause analysis for production incidents, reducing MTTR by 30%.
- Worked with Docker containers for application validation, troubleshooting, and operational support activities.
- Assisted in OpenShift-based application support including pod health checks, log verification, and deployment validation.
- Handled production incidents and coordinated with development, infrastructure, and support teams for rapid issue resolution.
- Used Git for version control, branch management, and deployment coordination.
- Documented standard operating procedures (SOPs) for incident handling, troubleshooting, and operational tasks.

PROJECTS

🚀 Construction Workforce Management System (github.com/shivam-1072/cwms)

- Built a production-ready web application from scratch using Django, PostgreSQL, Docker, and GitHub Actions CI/CD.
- Containerized the application with Docker and Docker Compose for consistent development and deployment environments.
- Designed CI/CD pipeline with GitHub Actions for automated builds, testing, and deployments.
- Modules: Site, Worker, Attendance, Payroll, Expense, Dashboard, and Authentication.
- Features: PDF/Excel payment slips, dynamic dashboards with date filters, receipt uploads, and role-based access control.

Tech: Python, Django, PostgreSQL, Docker, GitHub Actions

🚀 Containerization & DevOps Lab

- Developed and containerized a Flask-based banking monitoring application using Docker.
- Deployed on Kubernetes/Minikube using Deployment and Service YAML files.
- Practiced CI/CD workflows using Jenkins, Git, and Shell scripting.
- Performed pod monitoring, container troubleshooting, and log analysis.

Tech: Docker, Kubernetes, Flask, Jenkins, Git, Shell Scripting

Hospital Management System (Academic Project)

- Developed a web-based hospital management application using Java, JSP, Servlets, and MySQL.
- Implemented modules for patient registration, appointment management, and doctor records.

Tech: Java, JSP, Servlets, MySQL

EDUCATION

- **Master of Computer Applications (MCA)** - [2023 - 25]
Jain University
- **Bachelor of Science (Computer Science)** - [2018 - 21]
R. D. National College

CERTIFICATIONS

- AWS Cloud Practitioner Essentials
- Kubernetes Fundamentals
- Java Web Development - Aptech Learning
